

BED SENSOR

What is BED ?

BED is the brand new bed sensor designed by Neat for total comfort, for users and care personnel.

Designed with a completely new technology that allows a great reduction of annual maintenance costs.

BED is a high sensibility sensor that activates by contact, not being necessary to press.

How does it work ?

New BED sensor is like a belt, with 10 cm width. BED adjust perfectly to the mattress or the chair being completely unnoticed and ensuring the user comfort.

For exceptional cases, it is possible to use the multiple unit with 3 interconnected sensors covering a greater surface avoiding false alarms when users change position without leaving bed.

Functionalities for great confort

1. High sensitivity sensor that activates upon contact with the unit.

2. Ultrathin design ensuring user confort.

3. Replacement costs reduced thanks to new technology .

4. Suitable for mattress and chairs.

Advantages

- **Confort** : user can rest freely without any disturbance of the sensor.
- **Savings**: new technology that avoids annual sensors replacement.
- **Fast and easy installation**: fits perfectly mattress and chairs.
